

ENVIRONMENTAL POLICY (UNI EN ISO 14001:2015)

Progold S.p.A considers the environment the most fundamental part of its business strategy and it is aware that protecting the environment is a social responsibility in terms of sustainable development as well as a competitive factor for long-lasting economic growth.

For this reason, Progold undertakes to establish an effective and efficient Environmental Management System, in compliance with the norm UNI EN ISO 14001:2015

Progold's Management defines the goals and plans its internal processes using a risk-based thinking approach to implement the most appropriate actions for assessing and treating the risks associated with the processes and to take advantage of the opportunities identified.

For reaching the objectives, Progold's Management complies with the environmental laws and regulations that are in force as well as to other agreements undertaken with concerned parties.

The main environmental objective is to prevent pollution and to gradually reduce the environmental impact of its activities, products and services by:

- Using appropriate process organization, procedures, guidelines, and working instructions.
- Properly training the personnel.
- Using effectively and efficiently the energetic resources to reduce consumption through the use of energy safe tools, energy efficient lighting and by paying attention to the equipment configuration.
- Optimization of waste collection and the life cycle perspective of the products, in particular reducing the impact deriving from packaging.
- Communicating the environmental policy to set and maintain a transparent and collaborative relationship with the interested parties (personnel, clients, social organizations, public authorities, local communities, etc..) considering their requirements and expectations.
- Assessing in advance the environmental impacts connected with purchase processes, design processes and/or when new activities, new products and services are introduced, in order to make choices that do not solely depend on financial criteria.
- Assessing the suitability of the human and financial resources to achieve the strategic and environmental goals.
- Make suppliers aware of environmental safeguarding policies and to choose suppliers, when possible, that have adopted green technologies, work following Environmental Management Systems and have implemented a correct waste treatment.
